Application: Working Student (f/m/d) – Product Manager for AI, Data and Analytics (Data Analysis Focus)

Dear Hiring Team,

I am writing to apply for the Working Student (f/m/d) – Product Manager for AI, Data and Analytics position at SAP, with a strong focus on the data analysis aspects of the role: gathering and analyzing data, building decision-ready insights, and communicating results clearly to stakeholders.

I am a Master's student (SAP specialization) with 1.5+ years of experience at SAP Walldorf, where I worked in cross-functional environments requiring structured execution, attention to detail, and reliable delivery. I collaborated with stakeholders across teams and supported structured workflows in Agile ways of working (including Jira), which aligns well with supporting product teams through transparent reporting, coordination, and prioritization discussions.

My strongest match is hands-on analytics work with SAP Analytics Cloud (SAC). I designed and built an end-to-end sales analytics product in SAC: a 3-page interactive story that transformed 1,000+ raw sales records into insights for multiple audiences, using a persona-driven “Pyramid Analytical Framework” to separate executive KPI views from operational drill-down analysis. I implemented calculated measures (including profit margin % and cost ratios) and advanced linked analysis to enable one-click filtering across the full story. I also performed data profiling across 14 dimensional fields and 7 global regions to ensure complete, consistent reporting.

I would welcome the opportunity to contribute by supporting data collection, analysis, and insight communication for product prioritization and strategic decision-making in the AI, Data and Analytics space. I am eligible to work 80 hours per month or full-time as an intern in Germany, and I am open to working from different SAP locations as needed.

Thank you for your time and consideration. I would be happy to discuss how my SAP experience, SAC analytics work, and structured communication can support your team's goals.

Sincerely,

Varun Raval
