## **Application: Working Student / Internship Opportunities — SAP BTP, SAP Analytics Cloud (SAC), SAP S/4HANA**

Dear Hiring Team,

I am writing to express my interest in working student and internship opportunities in the areas of SAP Business Technology Platform (BTP), SAP Analytics Cloud (SAC), and SAP S/4HANA. I am a Master's student specializing in SAP Engineering and Analytics and bring 1.5+ years of experience at SAP Walldorf across multiple roles, where I developed a strong foundation in structured execution, stakeholder collaboration, and reliable delivery in fast-paced environments.

I am especially interested in roles where data and technology come together to support business decisions. In SAP Analytics Cloud, I designed and built an end-to-end sales analytics product: a 3-page interactive story transforming 1,000+ sales records into executive KPIs and operational drill-down insights. I implemented calculated measures (including profit margin % and cost ratios), applied linked analysis for intuitive cross-page filtering, and performed data profiling across 14 dimensional fields and 7 global regions to improve reporting completeness and consistency.

In parallel, I am strengthening my SAP development skills through academic work, including an automated Salary & HR Management web application using SAP UI5, Fiori Elements, and OData concepts, with dashboards and validation logic. Combined with my ABAP/RAP training and continuous learning mindset, I am building a profile that can contribute across analytics, application development, and cloud-oriented SAP scenarios.

I am eligible to work 80 hours per month or full-time as an intern in Germany and am open to opportunities across SAP locations and hybrid work models. Thank you for your time and consideration—I would welcome the opportunity to discuss how my background can support your team.

Sincerely,

**Varun Raval**
