

COVER LETTER

Dear Hiring Manager,

I am writing to express my interest in the Working Student position “UX/UI Software Design and Development Support” (Requisition ID: 433937) in St. Leon-Rot. As a M.Sc. SAP Engineering & Analytics student with a Master’s in Communication Design and hands-on frontend experience, I am very motivated to contribute to your knowledge-graph team at the intersection of UX, web technologies, and AI-driven information access.

My profile combines design thinking with modern web development. From my Communication Design background, I bring a strong sense for intuitive, visually clear interfaces and storytelling through layout, hierarchy, and interaction. From my technical side, I have fundamental experience with HTML5, CSS3, and JavaScript, and I am currently extending this into TypeScript and modern component-based frameworks in my own projects. I enjoy translating UX ideas into working UI prototypes and iterating based on feedback from designers, developers, and users.

In my recent projects, I have been working with SAP UI5/Fiori and Figma, designing and implementing responsive UIs that consume OData services and visualize real-time business data. This has trained me to think carefully about information architecture, reusable components, and accessibility, as well as to keep design documentation and assets in sync with the actual implementation—very much in line with assisting in interface design, participating in design reviews, and helping maintain and update design-related documentation.

I am comfortable working with Git (branching, committing, pull requests) and VS Code, and I am actively building better habits around clean code, meaningful commit messages, and small, reviewable changes. I am curious about React and similar frameworks and have started exploring component patterns and state management so I can contribute more effectively to modern frontend stacks. I see this role as a chance to deepen that knowledge in a professional environment while learning what good UX and engineering collaboration looks like in the context of SAP’s knowledge graph and AI use cases.

Personally, I am detail-oriented, collaborative, and genuinely curious about new tools and patterns. I like staying up to date with emerging UX/UI trends and technologies, both for inspiration and for understanding where they make sense in enterprise applications. I enjoy giving and receiving constructive feedback in design reviews, and I appreciate teams where designers, developers, data scientists, and business experts work closely together—as described in your international team setup.

I am fluent in English and at B1 level in German, and I am based in the Walldorf / Heidelberg / Mannheim / St. Leon-Rot region, so recurring office visits are easy to support. I can work up to 20 hours per week during the semester and full-time in semester breaks, and I have a portfolio of design and frontend work (SAC dashboards, SAP UI5 apps, and communication design projects) that I would be happy to share upon request.

Thank you very much for considering my application. I would welcome the opportunity to discuss how my UX sensibility, frontend skills, and enthusiasm for AI-supported knowledge experiences can support your UX/UI Software Design and Development work.

Best regards,
Varun Raval
