

COVER LETTER

Perfect — I have everything: the full job description and your new CV tailored for this role. Here is the cover letter in your exact style:

Dear Hiring Manager,

I am currently moving towards my second semester of my specialized Master's program in "SAP Engineering & Analytics" at Hochschule Fresenius in Heidelberg, a SAP-aligned curriculum that combines cloud-native software development, SAP technology and business process topics. Alongside this, I have gained 1.5+ years of work experience at SAP Walldorf in Services Sales, Non-Commercial Licensing and Transformation Advisory teams, where I developed strong skills in agile collaboration, technical documentation and cross-functional communication. This combination of SAP-specific studies and practical, transformation-related experience now motivates me to apply for the Working Student – Software Development, Product Experience & Analytics position (Requisition ID: 439019) in Walldorf.

In my current studies and personal projects, I am deliberately building the exact technical stack this role requires. My flagship project is an "Automated Salary & HR Management Web Application" built in SAP UI5 and JavaScript (ES6+) with TypeScript-aligned coding practices: I implemented MVC architecture, OData service consumption, a salary calculation engine with overtime and deduction logic, role-based access control and real-time dashboards using SAP UI5 chart libraries to visualize earnings and trends. I manage the entire project on GitHub using feature branching, pull request reviews and structured commit discipline, which maps directly to your requirement for initial Git and GitHub experience and your team's focus on reliable, consistent software delivery.

My technical work extends into the pipeline and automation side that your role also covers. I have built a "Retail Sales Data Cleaning Automation Pipeline" in Python where I clean and validate datasets, enforce data types, handle missing values and log KPI recalculations to produce stable inputs for downstream reporting — reflecting the scripting and automation mindset your team needs to eliminate manual steps and improve consistency. In parallel, I have explored basic GitHub Actions for build pipeline awareness and am keen to deepen this into Jenkins and more advanced CI/CD workflows as part of this working student engagement. Together with my SAP CAP experience (OData services, REST APIs, cloud-ready application design on SAP BTP) and my ABAP/RAP/CDS training in Eclipse ADT, I bring a full-stack, cloud-native perspective that covers both the development and the tooling layers your team works in.

The analytics and dashboard side of this role is also a strong match for my current focus. In my "SAC – End-to-End Sales Analytics Product", I built a three-page interactive story on 1,000+ sales records in SAP Analytics Cloud with executive KPIs, calculated measures (Profit Margin % and cost ratios) and Linked Analysis for one-click filtering across region and product, achieving 100% data

completeness and zero-error reporting for stakeholders. I am now extending this analytics work into SAP HANA Cloud and BTP, designing a pipeline from raw CSV data to live HANA calculation views such as CV_SALES_OVERVIEW and CV_SALES_VS_INVENTORY and finally SAC stories on live connections — which mirrors exactly how your team creates dashboards and visualizations for analyzing telemetry data and supporting data-driven decision-making.

I also bring a strong foundation in documentation and communication, which your role specifically lists as a core responsibility. Across my SAP roles and academic work, I have contributed to, reviewed and updated internal documentation to keep processes clear and current, and I am used to tailoring technical content for different audiences — from sales stakeholders to professors. My Master of Design in Communication Design background means I naturally think about structure, hierarchy and visual clarity when building interfaces, dashboards or documentation artifacts, which I see as an additional asset when contributing to internal tools and demo projects and bringing in my own ideas and solutions.

I am fluent in English and currently at German level B1, actively improving my German and preparing for TestDaF in 2026. I live in the Walldorf/Heidelberg area and am fully flexible for a hybrid setup; I am available from April 2026 to October 2027 at 20 hours per week during the semester and full-time during academic breaks, and I can attend the Walldorf office one to two times per week as required for this position. I am highly motivated to join the Product Experience team, contribute to build pipelines, automation scripts, telemetry dashboards and internal tooling, and learn from experienced developers while bringing my SAP UI5, CAP, Git and analytics skills into your team.

Thank you very much for considering my application. I would be pleased to discuss how my SAP-aligned studies, full-stack development projects and SAP work experience can support your team's objectives in software delivery and product experience analytics.

Best regards,
Varun Raval
