

COVER LETTER

Dear Hiring Team,

I am writing to apply for the Intern (f/m/d) – AI and UI Apps Development Support position in St. Leon-Rot. I am a 2nd-semester M.Sc. SAP Engineering & Analytics student at Hochschule Fresenius in Heidelberg, living in the Walldorf / St. Leon-Rot area and fully available on-site from April 2026. With 1.5+ years of experience at SAP Walldorf and a background in both software engineering and communication design, I am strongly motivated to help your team build AI-enhanced UI applications that make SAP internal users more effective.

My Master's program in SAP Engineering & Analytics is run in close cooperation with SAP and is explicitly designed to prepare students for roles in the SAP ecosystem, with modules on SAP BTP & Integration, S/4HANA ABAP/CA, SAP UI5/Fiori, SAP Analytics Cloud (SAC) and research projects directly aligned to SAP scenarios. Through our faculty and sessions with SAP BTP leadership (for example with Erik Bartmann and colleagues), we constantly align our projects with real BTP use cases and expectations, especially around cloud architectures and internal tooling for SAP teams.

Technically, I have been working exactly in the intersection your role describes. On SAP BTP, I designed a RISE-style retail analytics pipeline: loading and modeling data in SAP HANA Cloud, exposing it via CAP (Node.js) OData V4 services, and visualizing it through a multi-page SAP Analytics Cloud story with executive KPIs, drilldowns and time-series forecasting. In parallel, I am developing SAP UI5/Fiori applications (for example, a salary and HR management app) with MVC architecture, OData consumption, real-time dashboards, input validation and responsive layouts, and I have hands-on experience with Angular, JavaScript/TypeScript and Git-based workflows.

I am also deeply interested in AI-supported features. In Python, I built a data-cleaning and anomaly-detection pipeline that reduces manual preparation time by around 80%, and I have experimented with SAC's forecasting and LLM-style workflows inspired by LangChain/LangGraph concepts. During a Joule AI integration study with SAP, I conducted user interviews and synthesized insights on how AI assistants are adopted in enterprise environments, which helps me think about AI not only technically, but also from a user and change-management perspective.

My previous roles at SAP Services Sales MEE, Non-Commercial Licensing, and the Transformation Advisory Center (IX Studio) taught me how to work in agile teams, use Jira effectively, and deliver stakeholder-ready content under real project constraints. Combined with my M.Des. in Communication Design, this helps me design UIs and interactions that are both technically sound and pleasant for users who rely on them daily.

I am particularly excited about this internship because it sits at the intersection of AI, UI development, and SAP BTP in a location where I am already based. I would be glad to contribute

my experience with UI5, Angular, CAP, Python and SAC, and at the same time learn your specific AI and UI frameworks to build tools that make SAP's customer-facing teams more productive.

Thank you very much for considering my application. I would welcome the opportunity to discuss how my profile and ongoing projects can support your AI & UI Apps team in St. Leon-Rot.

Kind regards,

Varun Raval
