

COVER LETTER

Dear Hiring Manager,

I am writing to express my interest in the SAP Product Security Response iXp Intern position – Product Security Engineer (Requisition ID: 442295) in Walldorf. As a 1st-semester M.Sc. SAP Engineering & Analytics student with a Bachelor's in Computer Engineering, hands-on programming experience, and more than 1.5 years of SAP Walldorf experience, I am highly motivated to contribute to SAP PSIRT and help improve product security response through research, process improvements, and automation.

I bring a solid technical foundation that matches your expectations for this role. My skills include Python, JavaScript/TypeScript, basic Java, SQL, SAP HANA, and ABAP (RAP, CDS, AMDP), and I work with Git and GitHub using a feature-branching workflow for my development projects. In my “Automated Salary & HR Management” web application, I develop backend and frontend features using SAP UI5, OData services, and MVC architecture, implementing robust error handling, input validation, and code optimization while managing the codebase with Git/GitHub. In my SAP Analytics Cloud “End-to-End Sales Analytics” project, I designed a three-page analytics solution based on 1,000+ records, including calculated measures, data profiling across 14 dimensions and seven regions, and self-service filters, which trained me to work systematically with data and think in terms of end-to-end processes.

I am particularly interested in the intersection of security, automation, and process design. My profile focuses on SAP Datasphere and SAP Data Intelligence for data integration, cleaning, cataloging, and monitored, repeatable pipelines, combined with SAP Signavio for process transformation context. This has given me a process-oriented mindset and a strong interest in how structured data and automation can support governance, compliance, and operational excellence—highly relevant for PSIRT's mission to manage coordinated vulnerability disclosure, improve response processes, and develop evidence-based improvements. I regularly use AI and LLM-based assistants to explore patterns, structure analyses, and prototype ideas, and I am excited by the opportunity to apply such thinking to security response workflows, e.g., supporting triage, correlation, or reporting automation.

Through my roles in SAP Services Sales MEE, Non-Commercial Licensing, and the Transformation Advisory Center's Immersive Experience Studio, I have worked in Agile/Scrum and Kanban setups with Jira and SharePoint, collaborating with cross-functional stakeholders and supporting transformation and content projects. These experiences taught me to work independently, manage tasks with a sense of urgency, communicate clearly with diverse stakeholders, and pay attention to detail—soft skills that you explicitly highlight as important for this internship. I am comfortable learning new domains, and I am keen to deepen my understanding of product security response, vulnerability handling, and OSS vulnerability databases and scanners during this internship.

I am fluent in English and currently at B1 level in German, and I am based in the Walldorf / Heidelberg / Mannheim / St. Leon-Rot region, with the flexibility to work full-time for 8–12 months and be regularly present in the Walldorf office as required. I see this iXp internship as a perfect opportunity to grow in a security-focused environment, learn from experienced PSIRT engineers, and contribute to prototypes and concepts that improve SAP's product security response processes.

Thank you very much for considering my application. I would welcome the opportunity to discuss how my Python and GitHub experience, data and process focus, and SAP background can support SAP PSIRT and Global Security Operations.

Best regards,
Varun Raval
