

COVER LETTER

Dear Hiring Manager,

I am writing to apply for the Working Student (f/m/d) – SAP Services position. As a M.Sc. SAP Engineering & Analytics student with several working student roles at SAP Walldorf in communication, content creation, and transformation support, I am confident that I can take over the clerical, coordination, and content-focused tasks described in your posting as a reliable and structured student assistant.

Across my roles in SAP Demand Management / Services Sales MEE, the Transformation Advisory Center (Immersive Experience Studio), and Non-Commercial Licensing, I have consistently prepared internal and external communications, PowerPoint presentations, and stakeholder materials for different target groups. I am used to translating complex topics into clear, visually structured slides and documents that can be used by management and sales colleagues. This experience directly supports your need to prepare communications, presentations, and materials and to assist with enablement activities and rollout communications.

I have significant experience supporting strategic and transformation-related initiatives. In my work with SAP transformation advisory and services sales, I contributed to planning and executing campaigns and transformation-related activities, including the preparation of storylines, assets, and follow-up communication. I am comfortable working with roadmaps, rollout plans, and communication cadences, and I take a structured approach to organizing tasks and aligning stakeholders. This aligns well with assisting in strategic rollout planning and supporting transformation initiatives.

Event and meeting support are already part of my daily work as a student at SAP. I have helped plan and support internal events, workshops, and customer-related sessions, including preparing agendas, creating slides and templates, coordinating invitations, and capturing outcomes and action items. I am also used to coordinating and organizing internal meetings and recurring formats, ensuring that the right materials, participants, and follow-ups are in place. I enjoy this kind of organizational work and see it as a core strength.

Data and analytics are an additional asset I bring to this role. Through my Master's in SAP Engineering & Analytics and my projects with SAP Analytics Cloud and SAP Datasphere, I am comfortable collecting, structuring, and interpreting data to understand engagement and performance. I can support the evaluation of target group engagement using simple dashboards, reports, and Excel-based analyses and then feed these insights back into communication and enablement measures.

I work independently and in a very organized way, with high quality standards for both content and formatting. At the same time, I value teamwork and open communication and enjoy working closely with colleagues from different areas. I am fluent in English and have German at B1 level, and I am continuously improving my German through daily use and courses. Living in the Walldorf region, I can work on-site regularly as well as in a hybrid setup, and I am available for up to 20 hours per week during the semester and full-time during semester breaks.

I am very motivated to support your team with communication, coordination, and content work and to contribute to successful rollouts and transformation activities in SAP Services. I would be happy to discuss how my experience and working style can help your organization.

Thank you very much for considering my application.

Kind regards,
Varun Raval
