

COVER LETTER

Dear Hiring Manager,

I am writing to express my interest in the SAP iXp Intern position “SAP SM SSE Team Project Management Support” (Requisition ID: 442368) in Walldorf. As a 1st-semester M.Sc. SAP Engineering & Analytics student with a Bachelor’s in Computer Engineering, more than 1.5 years of experience at SAP Walldorf, and a strong focus on data, processes, and Agile project work, I am highly motivated to support Strategic Service Enablement (SSE) in driving strategic projects, governance, and service maturity within Client Technology Workplace.

I bring hands-on project support experience from several SAP roles. As Content and Communication Expert in Services Sales MEE, I supported regional initiatives across Middle and Eastern Europe, collaborating with sales and operations in Agile sprints using Jira, preparing and following up on alignment meetings, and helping to structure campaign and pipeline-related activities. In Non-Commercial Licensing, I managed structured workflows for digital asset curation and licensing, ensuring compliance and clear documentation, and in the Transformation Advisory Center’s Immersive Experience Studio I supported client-facing transformation projects and production workflows. Across these roles, I have planned and coordinated tasks, maintained documentation, captured meeting notes and action items, and supported reporting—very close to planning and monitoring project activities, maintaining project documentation and dashboards, and supporting governance meetings as described in your posting.

I am comfortable with Agile and Kanban concepts and digital tools for work management. I have worked in Scrum and Kanban setups and used Jira boards to manage user stories, tasks, and backlogs, which translates naturally to managing and updating Azure DevOps Kanban boards and work items. My technical skill set includes SAP Datasphere, SAP Data Intelligence, SAP Analytics Cloud, SAP S/4HANA, SAP BTP, SAP UI5/Fiori, ABAP (RAP/CDS/AMDP), and Git/GitHub, as well as standard Office 365 tools for documentation and presentations. In my SAP Analytics Cloud “End-to-End Sales Analytics” project, I built a three-page analytics product over 1,000+ records with executive KPIs, drilldowns, and detailed profiling across 14 dimensions and seven regions, which strengthened my ability to design dashboards, interpret data, and summarize key risks, issues, and trends for stakeholders—highly relevant for maintaining project dashboards and creating concise status summaries.

I work in a structured, analytical way and have a strong interest in service management and governance. My profile around SAP Datasphere, SAP Data Intelligence, and SAP Signavio is explicitly oriented toward understanding data flows, process context, and transformation, and I am familiar with the idea of monitored, repeatable pipelines and compliance-oriented reporting. This mindset aligns well with SSE’s focus on service delivery management, reporting and audit support, governance and standards, and knowledge collaboration. I am used to writing clear technical and process documentation, checklists, and guides in my SAP roles and projects, which fits your emphasis on documentation excellence and quality-assurance orientation for process guides, governance deliverables, and continuous improvement.

From a soft-skills perspective, I am self-driven, reliable, and comfortable working both independently and as part of international teams. My previous SAP roles required me to work with stakeholders across regions, manage my own tasks and deadlines, and adapt quickly when priorities changed, all while maintaining a high standard of communication and attention to detail. I enjoy observing patterns in how teams work, identifying improvement opportunities, and helping to structure and clarify next steps—matching your expectations around observation, strategic thinking, problem-solving, and advancing project and team goals through structured planning.

I am fluent in English and currently at B1 level in German, and I live in the Walldorf / Heidelberg / Mannheim / St. Leon-Rot region. I am able and willing to work full-time for at least six months from March 2026 and to be onsite in Walldorf as required for this role. I am excited about the opportunity to contribute to CTW's secure, productive digital workplace, support SSE's strategic projects and governance activities, and grow my project management and service management skills in a highly professional environment.

Thank you very much for considering my application. I would welcome the opportunity to discuss how my Agile project experience, data and process focus, and SAP background can support the SAP SM SSE team in its mission to optimize and govern service operations.

Best regards,
Varun Raval
