

COVER LETTER

Dear Hiring Manager,

I am writing to express my interest in the SAP Intern/Working Student position “SM Client Technology Workplace” (Requisition ID: 443286) in Walldorf. I am a 1st-semester M.Sc. SAP Engineering & Analytics student with a Bachelor’s in Computer Engineering and more than 1.5 years of SAP Walldorf experience in support-, operations-, and project-oriented environments, and I am very motivated to contribute to CTW Service Management while learning more about client technologies and sourcing.

One aspect of this role that particularly resonates with me is the explicit wish to work cross-culturally and to learn about new work-related technologies, especially AI. I already work in a very AI-centric way in my daily life and studies: I use generative AI tools to research complex topics, structure my thinking, and draft and refine documents such as this cover letter, which started as an AI-assisted draft that I then adapted and personalized to reflect my own voice and experiences. I have completed a couple of online courses on generative AI and LLMs and follow product updates and best practices regularly, because I see staying curious and up-to-date on AI as essential to remain relevant in the 2026 job market. In my projects, I use AI to summarize technical documentation, generate test ideas, explore code patterns, and quickly compare solution options, always with a critical view so that I keep control over quality and correctness. I am excited about the opportunity to bring this AI-supported working style into CTW’s environment and to explore with the team how AI can further support documentation, reporting, and operational tasks.

In addition, I bring experience that is closely related to support, operations, procurement, and project management. In SAP Services Sales MEE, I worked as Content and Communication Expert supporting demand-generation initiatives across the region, coordinating content requests, aligning with sales stakeholders, and helping to structure campaign activities—very similar to project support and operational coordination. In Non-Commercial Licensing, I managed digital asset curation and licensing workflows, which required process discipline, accurate documentation, and coordination with internal “customers” and stakeholders, all of which are typical of support and operations work. In the Transformation Advisory Center’s Immersive Experience Studio, I supported production workflows for client-facing transformation projects, helped plan and prepare sessions and content, and worked in Agile setups (Scrum/Kanban with Jira), which strengthened my project management mindset. These experiences give me a solid foundation to support CTW’s sourcing processes, operational tasks, and daily service management activities.

I enjoy working in international environments and have already collaborated with colleagues and stakeholders across the MEE region in my previous SAP roles, which has trained me to communicate clearly, adapt to different perspectives, and be respectful of cultural differences. I am fluent in English and currently at B1 level in German, and I see this role as a great opportunity to further grow in a cross-cultural context while contributing to a global team. I am based in the Walldorf / Heidelberg / Mannheim / St. Leon-Rot region and am flexible to work full-time during the internship period and be regularly present in the Walldorf office as required.

Thank you very much for considering my application. I would welcome the opportunity to discuss how my experience in support, operations, and project work, together with my AI-driven working style and interest in cross-cultural collaboration, can support the SM Client Technology Workplace team.

Best regards,
Varun Raval
