

COVER LETTER

Dear Hiring Manager,

I am writing to express my interest in the Working Student position “Business Support Partner Sales Execution” (Requisition ID: 443716) in Walldorf. I am a M.Sc. SAP Engineering & Analytics student based in the Walldorf / Heidelberg / Mannheim / St. Leon-Rot region with more than 1.5 years of SAP Walldorf experience in services sales and transformation roles, and I am very motivated to support the unit lead and virtual partner sales execution team with organization, communication, and data-driven governance.

I enjoy exactly the kind of work you describe at the core of this role: bringing structure into projects and programs, orchestrating stakeholders, and keeping the “engine room” of a team running smoothly. Organizing weekly, monthly, and quarterly meetings, preparing agendas, aligning and briefing speakers, and ensuring that forecast and alignment calls are well prepared and well documented is the type of work where I can contribute immediately. I like to set up simple but robust routines around cadences, templates, and follow-ups so that execution governance becomes predictable and transparent for everyone involved.

My previous SAP roles have trained me to support sales-related content and events. In Services Sales MEE (Demand Management), I worked closely with sales teams across the MEE region, helped prepare customer-facing decks and internal alignment materials, and supported demand-generation and enablement activities. In Non-Commercial Licensing and the Transformation Advisory Center’s Immersive Experience Studio, I developed communication assets and supported event-like engagements, which strengthened my ability to collect content from stakeholders, structure it into clear presentations, and contribute to the preparation and execution of internal and external meetings. These experiences align well with supporting partner, customer, and internal meetings/events, preparing presentations, and helping with internal communication and rollouts.

I work confidently with Microsoft Office (PowerPoint, Excel, Outlook, Teams) and collaboration tools such as SharePoint and Jira, and I use generative AI tools daily to accelerate research, draft and refine communication, and explore data narratives—always with a quality gate where I review and adapt the output myself. My analytics background (e.g., building a three-page SAP Analytics Cloud “End-to-End Sales Analytics” solution based on 1,000+ records) has taught me to pay attention to data quality and to present findings in a way that supports decision-making, which will help when supporting preparation of forecasts and business reviews.

Personally, I am organized, proactive, and comfortable working independently as well as in virtual, distributed teams. I like taking ownership of recurring responsibilities (such as governance meetings or communication cadences) while also contributing to ad-hoc business projects and administrative tasks, including social media presence where appropriate. I am used to working with senior stakeholders, managing my own workload, and keeping an overview of deadlines and dependencies, and I enjoy being the person others can rely on for accurate information and solid preparation.

I am fluent in English and currently at B1 level in German and am available for up to 20 hours per week during the semester and full-time during semester breaks. I appreciate that the role requires in-person presence in Walldorf/St. Leon-Rot at most once a week, which fits very well with my study schedule and commute. I would be very happy to bring my SAP experience, organizational mindset, and

communication and analytics skills to your Partner Sales Execution unit and to learn more about SAP's partner business in one of its fastest-growing segments.

Thank you very much for considering my application. I would welcome the opportunity to discuss how I can support the leader and virtual team in achieving their targets and ensuring smooth, transparent execution.

Best regards,
Varun Raval
