

COVER LETTER

Dear Hiring Manager,

I am writing to express my interest in the Intern/Working Student position “Data Curation and Developer Guides for Joule for Developers” (Requisition ID: 445169). As an M.Sc. SAP Engineering & Analytics student with a Bachelor’s in Computer Engineering, intensive training in S/4HANA ABAP, and more than 1.5 years of experience at SAP Walldorf in roles focused on technical content and communication, I am highly motivated to contribute to the ABAP Language Team by curating data for AI features and creating clear, accessible developer guides and learning materials.

My profile sits exactly at the intersection of software, AI, and didactics. I am building a focused profile around SAP Datasphere, SAP Data Intelligence, and SAP Analytics Cloud, with a strong interest in AI-supported development and analytics. I completed an intensive S/4HANA ABAP/CA training where I worked with RAP, CDS, AMDP, and ABAP Development Tools (ADT) in Eclipse, learning to design cloud-ready applications with robust error handling, debugging, and code optimization. Alongside this, I regularly use AI tools to explore code patterns, structure documentation, and accelerate analysis, which fits your focus on optimizing and further developing AI functionalities within Joule for Developers and curating data and use cases that make AI support truly useful for developers.

I bring strong experience in technical documentation, learning material creation, and clear communication of complex topics. Across my SAP roles—Content and Communication Expert for Services Sales MEE, Digital Assets Curator and Communication Expert in Non-Commercial Licensing, and Communication & Production Specialist at the Transformation Advisory Center’s Immersive Experience Studio—I have created stakeholder-ready content, structured documentation, and digital assets for transformation and sales initiatives. My background also includes a Master of Design in Communication Design, which trained me to present complex information in a clear, structured, and visually coherent way, and to think didactically when designing materials and narratives. These experiences align directly with your expectations to create developer guides and best practices, develop learning and training materials, and support knowledge sharing and user training for Joule for Developers.

From a tooling and data perspective, I am comfortable working with structured information and ensuring quality and consistency. In my “End-to-End Sales Analytics” project in SAP Analytics Cloud, I transformed more than 1,000 sales records into a three-page analytics product with executive KPIs, drilldowns, and self-service filters, and performed data profiling across 14 dimensions and seven regions to achieve 100% data completeness and zero-error reporting. This required careful curation, cleaning, and structuring of data so that it could be reliably consumed by business users—very similar to the mindset needed to curate and structure data for AI functionalities and align and standardize use cases across teams.

I also have hands-on software development experience that helps me understand the needs of ABAP and SAP developers. I am currently developing an “Automated Salary & HR Management” web application using SAP UI5, Fiori design principles, OData services, and MVC architecture, with Git/GitHub feature-branching and robust input validation and error handling. My broader technical stack includes SAP S/4HANA, SAP BTP, SAP HANA Database, ABAP (RAP, CDS, AMDP),

JavaScript/TypeScript, Python, and SQL, which gives me a solid foundation to understand language/runtime topics and developer workflows and to write guides and examples that feel realistic and relevant.

I work carefully, stay well organized, and enjoy structuring complex material into understandable building blocks. I am fluent in English and have B1-level German, and I am based in the Walldorf / Heidelberg / Mannheim / St. Leon-Rot region with availability of 20 hours per week during the semester and full-time during breaks; I am also very interested in a full-time internship period if scheduling allows, and on-site work in Walldorf is straightforward for me. I am excited about the opportunity to support the ABAP Language Team in building the foundations of developer-facing AI assistance and to help more developers adopt Joule for Developers effectively.

Thank you very much for considering my application. I would welcome the opportunity to discuss how my ABAP and SAP platform knowledge, AI and data curation mindset, and strong communication and didactic skills can support your team in scaling Joule for Developers.

Best regards,
Varun Raval
