

COVER LETTER

Dear Hiring Manager,

I am currently moving towards my second semester of my specialized Master's program in "SAP Engineering & Analytics", offered in close alliance between SAP and Hochschule Fresenius in Heidelberg, in a SAP-aligned curriculum that combines SAP technology with business processes, management and product-oriented topics. Alongside this, I have gained 1.5+ years of work experience at SAP Walldorf in Services Sales, Non-Commercial Licensing and Transformation Advisory teams. This combination of SAP-specific studies and practical, transformation-related experience now motivates me to apply for the SAP BTP Project Management Office iXp Intern (f/m/d) – Support for analytics projects in the SAP Business Technology Platform area.

In my current studies and personal projects I am deliberately moving closer to SAP BTP and data-driven steering. A central element is my "RISE-style" retail analytics journey project on SAP BTP, where I design an end-to-end pipeline from raw CSV to live analytics in SAP HANA Cloud and SAP Analytics Cloud. Starting from a "1000 Sales Records" dataset, I provisioned SAP HANA Cloud on BTP, defined the SALES_1000 table with 14 business attributes, and used a Python/pandas script to clean and convert date formats so that all 1,000 records could be imported without errors. On top of this, I planned a sequence of phases—data foundation, a side INVENTORY dataset generated in Python, HANA calculation views such as CV_SALES_OVERVIEW and CV_SALES_VS_INVENTORY, and finally SAC stories using a live connection—which mirrors how your team moves from data sources to automated analytics solutions based on live data for BTP leadership.

My academic and technical work further strengthens this analytics focus. In my "End-to-End Sales Analytics Product" in SAP Analytics Cloud, I built a multi-page story on top of 1,000+ sales records, with executive KPIs and drilldowns across region, country, product and sales channel, supported by a small portfolio that documents the story logic, metrics and visual choices. In parallel, my "Retail Sales Data Cleaning Automation Pipeline" in Python reflects a structured approach to data quality: I clean and validate datasets, enforce data types, handle missing values and log KPI recalculations, which prepares stable inputs for reporting and planning. Together with my master's research on "Migration from SAP ECC to SAP S/4HANA: Business Perspectives and Case Studies" and a paper on "SAP Fiori 2.0 and SAPUI5: Enhancing Enterprise User Experience", these projects help me understand both the data and the business/process side of SAP's transformation and BTP strategy.

I also bring hands-on experience with agile, data-driven and increasingly AI-supported ways of working. In my SAP roles, I collaborated in Jira-based agile teams to plan and track tasks, dependencies and progress across stakeholders, which is directly relevant for supporting project planning, task management and status reporting within a PMO context. In my analytics projects, I not only build dashboards and pipelines but also experiment with features such as SAC time-series

forecasting and Python-based prototypes to explore how simple AI-style functions and automation can speed up data-to-action workflows, which is closely aligned with your focus on workflow automation and AI test-cases and prototypes on SAP BTP.

I enjoy designing and supporting communication and enablement activities around these topics. Across my SAP and academic work, I have prepared presentations, documentation and summaries for different audiences—from Services Sales stakeholders to professors—and I am used to tailoring messages so that complex analytics and transformation topics become understandable and actionable. My design background (Master of Design in Communication Design) helps me think about structure and visual clarity when building dashboards or preparing communication materials, which I see as valuable when creating SAC content and project reports for the BTP leadership team.

I am fluent in English and currently at German level B1; I am actively improving my German and preparing for TestDaF in 2026, which goes beyond the basic level usually required for student roles. I live in the Walldorf/Heidelberg area and am flexible to relocate or commute for a hybrid setup; from April 2026 I am available for a full-time six-month internship and can be present in the SAP Berlin or Potsdam office at least three days per week, as requested for this iXp position. I am highly motivated to join the SAP BTP Project Management Office, contribute to analytics and automation projects, and learn from experienced colleagues while bringing my SAP experience, structured thinking and growing BTP analytics skills into your team.

Thank you very much for considering my application. I would be pleased to discuss how my SAP-aligned studies, BTP-oriented analytics journey and SAP project experience can support your team's objectives.

Best regards,
Varun Raval
