

COVER LETTER

Dear Hiring Manager,

I am currently moving towards my second semester of my specialized Master's program in "SAP Engineering & Analytics" in Heidelberg, a SAP-aligned curriculum that combines SAP technology with business processes, management and product-oriented topics. In parallel, I have accumulated more than 1.5 years of experience at SAP Walldorf in Services Sales, Non-Commercial Licensing and Transformation Advisory roles, where I worked in data-, content- and experience-driven environments. This combination of SAP-specific studies and practical transformation experience now motivates me to apply for the Working Student (446607) – Analytics and Digitalization Specialist for SAP Learning Services position in Walldorf.

In my current studies and personal projects, I am deliberately moving closer to SAP analytics and digitalization topics that are directly relevant for SAP Learning Services. A central element is my "RISE-style" retail analytics journey on SAP Business Technology Platform, where I design an end-to-end pipeline from raw CSV data to live analytics in SAP HANA Cloud and SAP Analytics Cloud: provisioning HANA Cloud, defining a SALES_1000 table with 14 business attributes, cleaning and converting 1,000 records in Python/pandas, and building calculation views and SAC stories on top. This mirrors how your team designs and maintains dashboards and reports based on SAP Enterprise Analytics and Microsoft Excel to steer global delivery: starting from complex, long data sets and turning them into stable, meaningful analytical cockpits for decision-makers.

My academic and technical work further strengthens this focus on analytics and reporting. In my "End-to-End Sales Analytics Product" in SAP Analytics Cloud, I built a multi-page story on 1,000+ sales records, with executive KPIs and drilldowns across region, country, product and channel, and documented the story logic, metrics and visual choices in a small portfolio. In a separate "Retail Sales Data Cleaning Automation Pipeline" in Python, I clean and validate datasets, enforce data types, handle missing values and log KPI recalculations to prepare reliable inputs for reporting and planning, which aligns well with your requirement to read, interpret and structure complex and long data columns into reports and dashboards. Together with my master's research on S/4HANA migration and Fiori/UI5 UX topics, these projects help me understand both the data and process side of SAP's learning and transformation journeys.

I am also highly interested in the digitalization side of learning services. In addition to using SAP Analytics Cloud and SAP HANA, I work with SAP BTP, Jira and Figma for my own projects and group work, and I am keen to deepen this in a professional setting. I am particularly excited that this role involves contributing to an "AI-assisted user learning and change management app" on SAP BTP using generative AI. In my daily work, I already use generative AI as a thinking partner to research topics, structure content and draft first versions of texts and data outlines, which I then refine and validate myself; I would like to bring this AI-supported working style into your digitalization initiatives for learning methodology and service portfolio.

I enjoy designing and supporting communication and enablement around data-driven topics. Across my SAP roles and academic work, I have prepared presentations, documentation and summaries for different audiences—from sales stakeholders to professors—and I am used to tailoring messages so that analytics and change topics are understandable and actionable. My design background (Master of Design in Communication Design) helps me think about structure, visual hierarchy and clarity when building dashboards, Excel reports or SAC stories and when designing communication artifacts, which I see as valuable when creating and maintaining cockpits, reports and learning-related visuals for SAP Learning Services.

I bring advanced skills in Excel (including formulas, pivot tables and structured formatting) from academic and project work and basic PowerPoint skills, and I am motivated to expand into macros and Enterprise Analytics tooling as part of this role. I work in a self-organized, structured way, enjoy diving into data to identify patterns, and have a “can-do” mentality when it comes to learning new tools such as Figma, Jira and SAP BTP to support digitalization measures. I see this position as an excellent opportunity to combine my SAP analytics path with impactful learning services that enable customers to adopt SAP cloud solutions successfully.

I am fluent in English and currently at B1 level in German and am actively improving my German with the goal of taking TestDaF in 2026. I live in the Walldorf / Heidelberg / Mannheim / St. Leon-Rot region, am fully flexible for a hybrid setup, and have more than four semesters remaining in my studies, which matches your requirement for a longer-term working student engagement. I am highly motivated to support SAP Learning Services in its analytics and digitalization initiatives and to learn from experienced colleagues while bringing my SAP-aligned studies, data-driven mindset and growing BTP/analytics skills into your team.

Thank you very much for considering my application. I would be pleased to discuss how my SAP analytics journey, digitalization interest and SAP project experience can support your team’s objectives in managing and evolving SAP Learning Services.

Best regards,
Varun Raval
