

COVER LETTER

Dear Hiring Manager,

I am currently moving towards my second semester of my specialized Master's program in "SAP Engineering & Analytics", offered in close alliance between SAP and Hochschule Fresenius, Heidelberg, in a SAP-aligned curriculum that combines SAP technology with business processes, management and product-oriented topics. Alongside this, I have gained 1.5+ years of work experience at SAP Walldorf in Services Sales, Non-Commercial Licensing and Transformation Advisory teams. This combination of SAP-specific studies and practical transformation-related experience motivates me to apply for the Working Student (f/m/d) – Transformation Management Office (TMO) in Software Asset Management (SAM) position in IT Strategic Central Services.

During my time at SAP Walldorf, I already worked in environments that are close to the focus of the SCS team. As Content and Communication Expert in Services Sales MEE, I created and maintained materials for Services Sales initiatives, worked in agile sprints using Jira, and gathered feedback from sales and management to refine deliverables until they were ready for use across the region. As Digital Assets Curator and Communication Expert in Non-Commercial Licensing, I curated and structured digital assets, verified compliance with internal guidelines and maintained clear status tracking, which helped stakeholders work with up-to-date and reliable information. Later, as Communication & Production Specialist at the Transformation Advisory Center MEE (Immersive Experience Studio), I supported transformation advisory sessions by preparing high-quality digital assets and session materials, coordinating feedback, and documenting key requirements, decisions and outcomes so that assets and experiences could be reused consistently. These roles trained me to support IT and business transformation activities through structured communication, stakeholder collaboration and a reliable, self-driven working style, which aligns closely with the TMO's mission to shape ways of working, collaboration models and continuous improvement.

My academic work further deepens my understanding of transformation topics that are relevant for Software Asset Management and IT strategy. In my master's research paper on "Migration from SAP ECC to SAP S/4HANA: Business Perspectives and Case Studies", I analyze drivers such as value realization, risk mitigation and change management and relate them to customer transformation journeys and the intelligent enterprise vision. In another paper, I examine SAP Fiori 2.0 and SAPUI5 and how improved user experience supports adoption and productivity. Together with modules in business process management, analytics and SAP BTP, these studies help me understand how SAP's corporate goal of "Best Corporate Processes and Information Technology" is translated into concrete initiatives and how IT transformation, communication and organizational development need to work together to deliver value. I am eager to apply this understanding to the context of Software Asset Management and support the SAM TMO in turning IT and SCS strategy into tangible outcomes.

I also bring hands-on experience with agile and data-driven ways of working. In my SAP roles, I collaborated in agile teams using Jira to plan and track tasks, dependencies and progress across stakeholders. My technical projects, such as the “Retail Sales Data Cleaning Automation Pipeline” in Python and an “End-to-End Sales Analytics Product” in SAP Analytics Cloud, reflect a structured, analytical approach: I clean and validate data, define and check KPIs, and document results so that others can rely on them. These experiences have strengthened my structured thinking, analytical skills and comfort working in changing environments—qualities that I see as essential for supporting change management, process analysis, workshops and retrospectives within the SAM TMO.

I enjoy designing and supporting communication and enablement activities. Across my SAP and academic work, I have prepared presentations, documentation, and summaries for different audiences, from Services Sales stakeholders to academic supervisors, and I am used to tailoring messages to make complex topics understandable and actionable. My design background (Master of Design in Communication Design) helps me to think about structure and visual clarity when preparing communication materials, which I believe is valuable when creating communication content that supports change across multiple units.

I am fluent in English and currently at German level B1; I am actively improving my German and preparing for TestDaF in 2026, which goes beyond the “basic understanding” requested. I already have experience working in mixed German/English environments at SAP and feel comfortable communicating and asking questions in both languages, and I am committed to further improving my German to better support collaboration and internal communication.

I live in the Walldorf/Heidelberg area and am fully flexible for a hybrid working model as described for this role. From March 2026 to October 2027, I am available as a working student with up to 20 hours per week during the semester and full-time during semester breaks. I am highly motivated to join the SCS Software Asset Management Transformation Management Office, support change management and transformation initiatives, and learn from experienced transformation leads while contributing my SAP experience, structured thinking and communication skills.

Thank you very much for considering my application. I would be pleased to discuss how my SAP-aligned studies, transformation-related SAP experience and interest in agile and change management can support your team’s objectives.

Best regards,
Varun Raval
