

COVER LETTER

Dear Hiring Manager,

I am currently moving towards my second semester of my specialized Master's program in "SAP Engineering & Analytics" in Heidelberg, a SAP-aligned curriculum that combines SAP technology with business processes, management and product-oriented topics. Alongside this, I have gained 1.5+ years of work experience at SAP Walldorf in Services Sales, Non-Commercial Licensing and Transformation Advisory teams, working in data- and reporting-intensive environments. This combination of SAP-specific studies and practical, transformation-related experience now motivates me to apply for the SAP iXp Intern – Data Analytics and Reporting position (Requisition ID: 448008) in Walldorf.

In my current studies and personal projects, I am deliberately moving closer to data analytics and reporting topics that are directly aligned with this role. A central element is my "RISE-style" retail analytics journey on SAP Business Technology Platform, where I design an end-to-end pipeline from raw CSV to live analytics in SAP HANA Cloud and SAP Analytics Cloud: provisioning HANA Cloud, defining a SALES_1000 table with 14 business attributes, cleaning and converting 1,000 records in Python/pandas, and building calculation views (for example CV_SALES_OVERVIEW and CV_SALES_VS_INVENTORY) and SAC stories on top. This mirrors how your Data and Reporting Analyst intern supports the Chief of Staff by collecting, analyzing and presenting data from multiple sources in a clear, accurate and actionable way for executive stakeholders.

My academic and technical work further strengthens this analytics and reporting focus. In my "End-to-End Sales Analytics Product" in SAP Analytics Cloud, I built a multi-page story on 1,000+ sales records, with executive KPIs and drilldowns by region, country, product and channel, supported by a small portfolio documenting story logic, metrics and visual choices. In parallel, my "Retail Sales Data Cleaning Automation Pipeline" in Python reflects a structured approach to data quality: I clean and validate datasets, enforce data types, handle missing values and log KPI recalculations, which prepares stable inputs for reporting and planning and aligns well with your emphasis on data accuracy, integrity and regular quality checks. Together with my master's research on "Migration from SAP ECC to SAP S/4HANA: Business Perspectives and Case Studies" and a paper on "SAP Fiori 2.0 and SAPUI5: Enhancing Enterprise User Experience", I am developing a strong understanding of both the data and business perspectives relevant for strategic analytics.

I also bring hands-on experience with turning analysis into clear reporting and visualization. In my SAP roles and projects, I collaborated in agile teams using Jira to plan and track tasks and contributed to management-ready presentations and summaries. In my analytics work, I not only build dashboards in SAC but also design Excel-based reports and use visualization best practices from my design background to simplify complex data into clear, concise and visually engaging

formats, which I see as directly relevant for creating dashboards, charts and regular reports for executive teams.

I am very interested in the cloud adoption and usage-monitoring aspects of this internship. My BTP-based projects and S/4HANA migration research give me an early understanding of how customers move to cloud solutions and why usage and value realization need to be measured. I would be excited to support monitoring of cloud service adoption and consumption, help identify gaps in usage and contribute data-driven insights that inform improvement measures, as described for this role. In my own analytics work, I already experiment with simple forecasting and automation features in SAC and Python to speed up data-to-insight workflows, which I would like to bring into your strategic projects and ad-hoc analysis tasks.

Across my SAP and academic experience, I have built strong communication skills and a solid toolkit for working with data. My Master of Design in Communication Design helps me think in terms of structure, hierarchy and clarity when preparing dashboards, infographics or executive slides, and I am used to tailoring messages to different stakeholders—from sales management to professors. I am proficient with Excel (including formulas and pivot tables) and PowerPoint, and I am motivated to deepen my skills in statistical analysis and data visualization tools as part of this role, while contributing a self-organized and detail-oriented working style and a high focus on data quality.

I am fluent in English and currently at German level B1; I am actively improving my German and preparing for TestDaF in 2026. I live in the Walldorf/Heidelberg area and am flexible for a hybrid setup; from April 2026 I am available for a full-time six-month internship, which fits the requirements for this iXp position. I am highly motivated to join your team as an SAP iXp Intern – Data Analytics and Reporting, contribute to executive reporting and cloud usage analytics, and learn from experienced colleagues while bringing my SAP experience, structured thinking and growing analytics skills into your organization.

Thank you very much for considering my application. I would be pleased to discuss how my SAP-aligned studies, analytics journey and SAP project experience can support your team's objectives.

Best regards,
Varun Raval
