

Dear Hiring Team,

I am writing to express my strong interest in the Working Student (f/m/d) – Quality Assurance (QA) Support position (Requisition ID: 438459) at SAP in Walldorf. With over 1.5 years of hands-on experience at SAP Walldorf across multiple roles, I am excited to contribute my growing programming skills, analytical mindset, and experience with structured workflows to support your QA team and help ensure the reliability of enterprise-grade solutions.

In my recent role as Communication & Production Specialist at the Transformation Advisory Center MEE / IX Studio, I supported hybrid events, executive-facing content, and stakeholder communication across the MEE region, often working closely with cross-functional teams and developers. I streamlined processes for managing 50+ digital assets and reduced editing time by 25% through AI-assisted tooling, sharpening my attention to detail and my ability to document and reproduce issues clearly. Earlier, as a Content and Communication Expert in Services Sales MEE, I learned to work in Agile setups with Jira, align deliverables with brand guidelines, and collaborate effectively across teams – all highly relevant for test documentation, defect tracking, and working closely with QA engineers and developers.

My technical background aligns well with your requirements for manual and automated testing. I have hands-on experience with JavaScript (ES6+), Python, SQL and Git/GitHub, and I am currently developing an automated Salary & HR Management web application using SAP UI5, OData services, and data visualization for real-time dashboards. This project gives me practical exposure to web application behavior, error handling, and API-based workflows, which I am motivated to extend into test design, automation scripting, and frameworks such as Playwright and Selenium. I bring a structured, detail-oriented approach, strong documentation skills, and a genuine interest in quality assurance, test automation, and continuous improvement.

I am in my first semester of the M.Sc. SAP Engineering & Analytics program at Hochschule Fresenius, Heidelberg, and I am available for the full two-year duration of my studies (until September 2027). Based in the Walldorf/Heidelberg/Mannheim/St. Leon-Rot region, I am available for up to 20 hours per week during the semester and full-time during breaks. I would welcome the opportunity to discuss how my SAP experience, programming background, and motivation to grow in QA and test automation can contribute meaningfully to your Public Cloud Runway team.

Sincerely,

Varun Raval
